IDENTIFIERS Manitoba

ABSTRACT

In order to provide a basis for discussion of declining enrollment in the province of Manitoba, the Department of Education commissioned this background paper. Topics covered include student enrollment data, courses and programs, the teaching force and teaching career, student transportation, administrative arrangements, educational finance, and the management of retrenchment. A brief summary of the seminar for which this paper was commissioned is included and statistical tables are appended. (WD)

PREFACE

Reductions in the numbers of students attending school during the past decade have created considerable concern for school personnel in a variety of jurisdictions throughout North America. School systems which had been struggling to cope with constantly increasing enrolments during the post war period to the late 1960's suddenly found themselves faced with new problems as student numbers crested and then began to fall.

Manitoba's experience with enrolment reductions has been similar to, though somewhat less pronounced than that found in other parts of the continent. Maximum student populations occurred in this province in 1971, with elementary and secondary enrolments that year exceeding 247,000. In 1978, the same school systems were catering to 221,000 students, a reduction of about 1.5 per cent each year during that period. This reduction in student numbers has created a variety of strains and stresses, which have been met largely through the efforts of personnel in individual schools and school systems. Not too much has been done to examine the overall effects of such reductions or to plan strategies at the provincial level to meet the resulting challenges.

During 1978 the Department of Education undertook to examine the implications of the declining enrolment phenomenon for the school systems of the province. As an initial step in this endeavor the Department of Educational Administration was commissioned by the Research Branch, Department of Education to prepare a set of background papers which was to be used as a basis for discussion of the subject at a seminar involving representatives from a cross-section of educational organizations in Manitoba. The accompanying booklet includes the background material prepared for this purpose.

The seminar on declining enrolments was held at the University of Manitoba on ~~April~~ May 24 and 25, 1979. The Manitoba Association of School Trustees, The Department of Education, The Manitoba Teachers' Society, The Manitoba Association of School Superintendents, The Manitoba Association of School Business Officials, The University of Manitoba, and other organizations were in attendance at the Conference. A brief summary of the conference deliberations is included in Chapter IX of this report.

I. INTRODUCTION

During the three decades between 1945 and 1975, public education in Manitoba grew phenomenally. The number of students rose from 118,390 in 1945 to a high of 247,504 in 1971, before falling off to 230,347 in 1975. The number of teachers increased from 4,353 in 1945 to 12,216 in 1975. School board expenditures increased from $10.8 million in the 1944-45 school year to $296.0 million in 1975.

The growth which occurred between 1945 and 1975 was accompanied by new administrative arrangements for education and by major changes in education finance. The most striking of the new arrangements was the creation of school divisions, responsible for secondary education after 1959 and for both elementary and secondary schooling during and following 1967. This consolidation of school districts resulted in the decrease in the number of school jurisdictions in Manitoba from 1,690 in 1951, to 67 in 1975. The major changes in educational finance during this period were associated with the foundation program which was introduced in 1967. This program was designed to redistribute and equalize funds available for schooling throughout Manitoba to provide for greater equality of opportunity for all Manitoba students.

Qualitative changes accompanied this growth. Multiage and multigrade classrooms were replaced by single age and single grade classrooms. The qualifications of teachers improved dramatically, with the percentage holding at least one degree rising from 15.6 percent in 1945 to 63.8 percent in 1975. Pupil-teacher ratios in the province declined from 26.3:1 in 1950 to 18.9:1 in 1975. Curricula have changed, especially in the secondary schools, reflecting increased attention to the sciences and technologies and increased concern for student choice and school level initiatives.

Underlying all of these changes--qualitative, administrative and quantitative--were certain beliefs which were widely shared.

Three of these beliefs stand out. One was the belief that public education is a fundamental social and personal good. A second belief was that everyone, regardless of where he lived, had the right to essentially the same kind of opportunities in education. The third commonly held belief was that increasing the resources devoted to education (teachers, money, facilities, support services, etc.) would lead to improved educational results.

Educational policies between 1945 and 1975 reflected these beliefs. The belief that education was a social good was used to justify massive increases in public spending for education; expenditures for education were regarded as an investment in the future of society. The belief in equity underlay procedures for financing public education and such developments as the consolidated rural high school which was to give rural students access to the same kind of educational programs as was available to their urban counterparts. And the belief that increased resources would lead to improved outcomes was reflected in policies to increase the qualifications of teachers and to reduce student teacher ratios in the schools.

In recent years, however, the pressures for growth in school systems in Manitoba have reversed themselves. Enrolments peaked in 1971, reaching their maximum of 247,500 and have been gradually declining since at the rate of 3,600 students a year. This decline is forecast to continue well into the future. Accompanying this decline in student population is a mood of fiscal restraint on the part of governments and the general population. It appears that we are in the early stages of what will be a substantial contraction of public education in Manitoba.

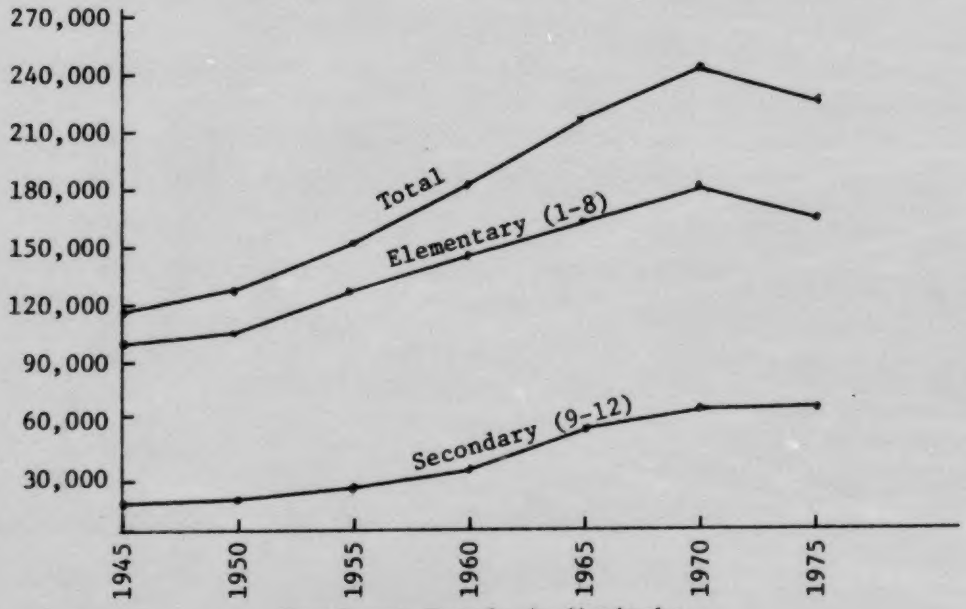
What will be the response to this contraction? Which, if any, of the beliefs and policies which underlay the expansion between 1945 and 1975 will have to be altered as we come to grips with contraction? This paper, and the conference for which it was prepared, is an attempt to face up to questions such as this.

II. STUDENTS

Enrolments in public education in Manitoba more than doubled between 1945 and 1971. There were three main reasons for this growth. One was the simple fact of population growth, especially within the school-age population. A second was the mounting of the educational aspirations of parents and their children. The third was the stress in public policy on educational development. The second and third combined to produce a major increase in "educational participation rates"--referring to a higher proportion of each age group remaining in school, and for more years.

Enrolments began to decline in 1972 at the rate of about 3,600 students per year. This decline, which has had a gradual but cumulative impact and is now seen in problem terms, can be attributed to a decline in the size of the school age population and a decrease in participation rates.

The interaction amongst these factors accounts for the enrolment trends depicted in the following chart.



Enrolment Trends in Manitoba

But school enrolments have not fallen uniformly. Elementary enrolments have fallen more rapidly than secondary enrolments to date (a substantial decline in secondary enrolments is imminent as the reduced elementary school population nears high school age). Even when the overall trend is toward decline, net gains continue to be recorded in some regions and for some programs: for example, elementary school enrolments continue to rise in the northern region and the demand for intensive French programs for anglophone students is increasing in urban areas. Changes in public policy also have an impact on enrolments, especially among certain groups of students; for example, the promulgation of Bill 58 may increase the number of students with special needs attending public schools. And there is yet another side to the picture of enrolments in Manitoba's public schools. All of what has been written above has focussed on enrolments among the traditional, school-aged (6-19) population. It is conceivable that the public school system could diversify to attract non-traditional students, thereby increasing overall enrolments and utilizing the now excess capacity of the school system. For example, in Manitoba there are more than 150,000 adults who hold a grade nine education or less; many of these (the precise number is unknown) are unable to read or write. Could the public school system develop programs for adults, or illiterate adults?

The student related issues that we draw attention to are of three kinds:

1. How can the schools accommodate to the general decline in enrolments of students in the traditional school programs?

2. Since particular programs, groups and regions will experience enrolment increase despite the general decline provincially, what adjustments can be made in their interests?

3. What should be the role of the public school system in upgrading the academic competence of early school leavers, adults, and other "non-traditional" students?

Policy issues affecting student enrolments have implications in terms of programs, buildings and facilities, staffing, etc., all of which are issues areas which are examined later in this document.

III. COURSES AND PROGRAMS

In the period between 1945 and 1978, courses and programs available to students in Manitoba schools changed markedly in response to a number of mutually reinforcing trends: (a) growing student numbers; (b) increasing access to progressively higher levels of education; (c) a broadening of the aims of education; and (d) increasing specialization.

As a result of these trends, the schools of 1975 had a longer and more specialized frame of activity than those of 1945. Teaching had become much more of a specialized activity--by subject, by grade level, and by type of student. School programs became broader and deeper, enabling students to select work from more areas of study and from a greater variety of courses, and to pursue their interests in greater depth. Some courses, such as those in the classical languages of Latin and Greek, virtually disappeared, while others, particularly in the sciences and vocational areas, grew in importance. Programs became less prescriptive, and encouraged more student choice and school initiative. Correspondence study, once an importance feature of high schooling in rural Manitoba, was largely replaced by in-school work.

The substantial increases in student enrolments from 1945 through the 1960's was a major element making feasible this expansion in educational courses and programs.

More recently, however, the decline in student numbers and other factors have begun to alter once again the context within which educational activities occur. Teaching is becoming less specialized as more teachers are required to teach more and more subjects (about which they may know less and less); multiage classrooms are reappearing; students with special needs being mainstreamed. School programs are being curtailed and, if only because of limitations in what is offered, made more prescriptive. Correspondence studies are on the rise.

These recent trends are significat and, as they continue to develop, will have a profound impact on education especially in rural Manitoba where the educational effects of declining enrolments are likely to be magnified.

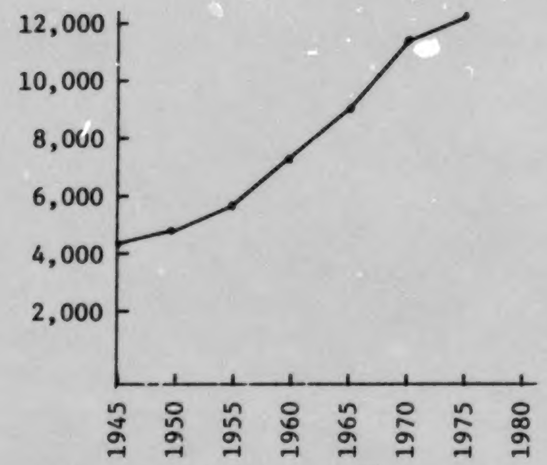
Are educators ready to face up to the apparent consequences of these trends? In seeking to modify the aims and priorities of the 1960's and early 1970's to the conditions of the late 1970's and early 1980's, and in our rush to please everyone, will we find our educational system to be characterized by a confusion of aims, without priorities, and forced to build a paper house to conceal the bare spots?

To raise these questions is not to be harshly critical of educational systems. Rather it is to sympathize with their plight. The most important problem now confronting educational systems is in the adjustment of their aims and frames of activity.

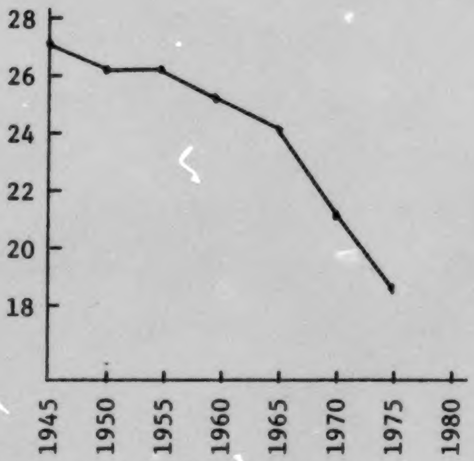
IV. THE TEACHING FORCE AND THE TEACHING CAREER

Teachers and school administrators, next to students, are the largest and most crucial groups of personnel in Manitoba's education system. The number of professional staff members employed in the public schools of the province grew during the post-war period from 4,533 in 1945 to approximately 12,000 in 1971, and has remained relatively stationary at the level since.

The increase in the numbers of professional staff during this period is a result of several factors. Increasing enrolments is a major cause. Another of significance is related to the increase in the number of educational specialists--full-time and part-time administrators, librarians, guidance counsellors, etc.--whose duties tend to be largely outside the traditional classroom teacher role. A third factor, in part associated with the latter, relates to the decreasing ratio of students to teachers in the school systems.

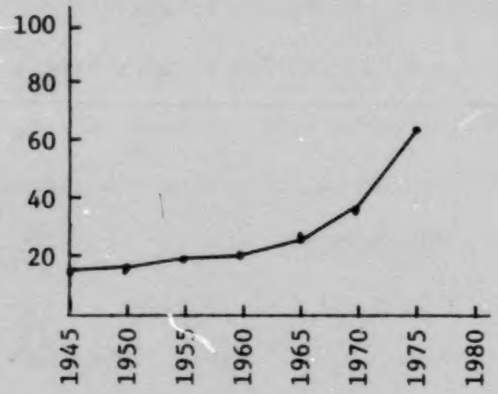


The Manitoba Teaching Force
1945-78

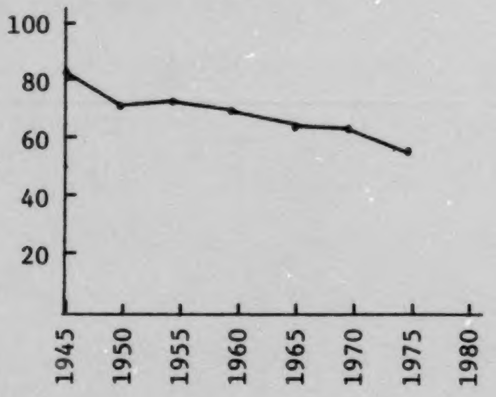


Pupil-Teacher Ratios
1945-78

The teaching force in Manitoba, in addition to changes in absolute numbers, has undergone remarkable changes in terms of qualifications, experience, and gender during recent years.



Percent of Teaching Force with One or More Degrees



Percent of Females in the Teaching Force

Now, however, the trend to growth in the number of teachers employed is being replaced by a trend towards decline. If present staff-student ratios are held constant or allowed to rise fewer teachers will be needed. This will set in motion a chain of reactions. The number of people trained and employed as teachers will be reduced. The average age and experience of teachers will rise. With fewer opportunities for movement, turnover within schools will be reduced.

This trend towards decline, and its consequences, can be viewed from two perspectives. One perspective draws attention to gains. On the whole, experienced teachers are better on the job than inexperienced ones. Smaller annual turnover rates among teachers will make for move continuity in school programs. The other perspective looks towards the dark side. There is evidence that older teachers tend to be less innovative in their methods and less open to the concerns of students. With fewer opportunities for promotion, and more competition for the positions which do become available, frustration may result. The people who do move out of teaching are likely to be those who are energetic and successful, leaving the inept behind. The salary costs of school divisions and districts, which now account for about 70 percent of their budgets, will be driven upwards. Women and minority group members may have difficulty in gaining appointments to administrative positions in education.

The issues related to teachers, then, involve questions of numbers and, far more importantly, of quality education. With respect to the number of teachers we ask:

1. What are the future prospects for teacher supply and demand? Should teacher supply be regulated?

2. What are the prospects of teachers who are currently employed? How many will be reassigned or released? Under what conditions?

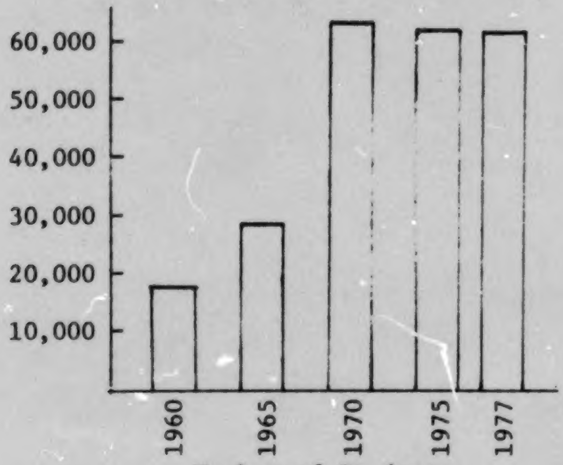
With respect to matters affecting the quality of the teaching force we ask:

1. How much emphasis, by whom and in what form, will be given to the continuing education of teachers to maintain their skill, to renew them professionally, or to make possible their reassignment.

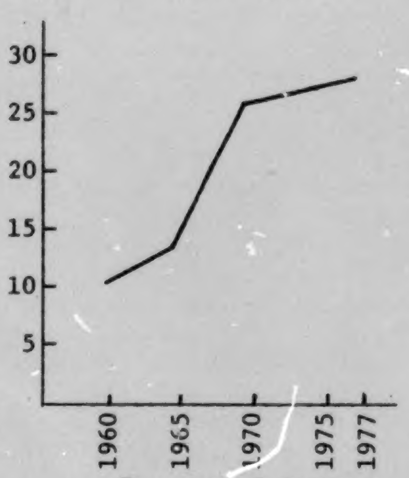
2. How might career opportunities in education, for young teachers, women and members of minority groups, be enhanced?

V. STUDENT TRANSPORTATION

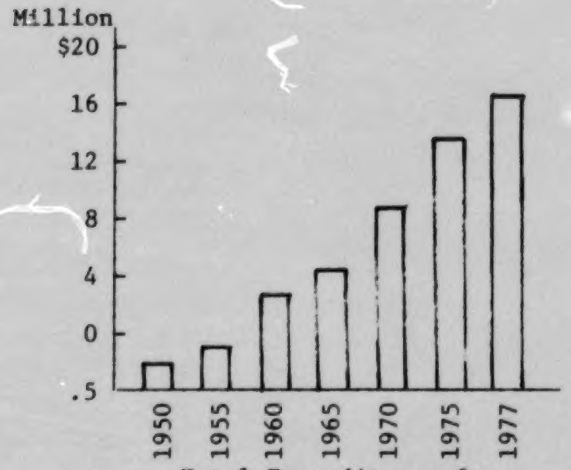
Student transportation services have become an integral part of education in Manitoba in recent years. During the period from 1960 to 1977 the number of transported students increased from a daily total of 18,900 to 61,400. In the same period expenditures for transportation services by school board grew from $2.9 million to $16.5 million. The following charts indicate changes in pupil transportation services in recent years.



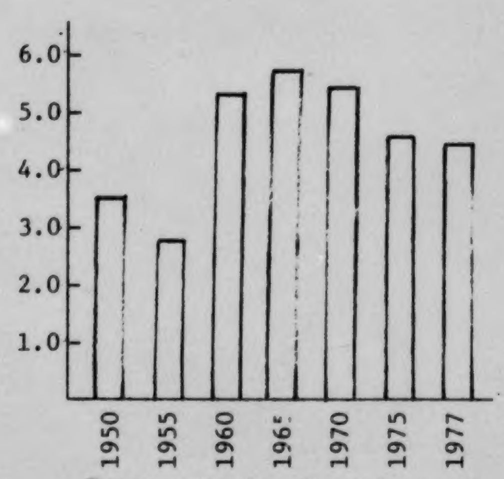
Number of Students Transported Daily



Percent of Student Population Transported Daily



Total Expenditures for Student Transportation



Transportation Expenditures as Percent of Total Operating Expenditures

The total number of students transported daily by bus has tended to decline slightly recently mirroring the general decline in student population. However, the percentage of students transported continues to increase. While total costs of student transportation services have continued to rise, the percentage of total operating expenditures devoted to student transportation has declined in recent years.

Student transportation services are of special significance to school divisions in rural Manitoba. More than half of all rural students are transported to school, and transportation expenditures make up very substantial portions of the operating budgets of rural school divisions. A variety of factors, including declining enrolments and rapidly rising fuel costs, have resulted in substantial increases in per pupil costs of student transportation in rural divisions in recent years.

Transportation services are of growing importance in urban divisions as well. While the numbers of students and the costs involved in urban divisions is not as great as in rural areas, both are increasing in the urban divisions.

The burden of providing pupil transportation services varies considerably from division to division, depending upon such factors as population density, total mileage to be travelled, school board policies regarding busing service, and input costs.

Because of the crucial significance of this service especially in rural areas in Manitoba, the following questions are raised:

1. What is an equitable distribution of the financial burden for student transportation between local and provincial authorities, in both rural and urban settings?

2. Can a satisfactory formula for provincial financial support be

devised which will take into consideration the variety of variable cost factors involved in the provision of student busing services?

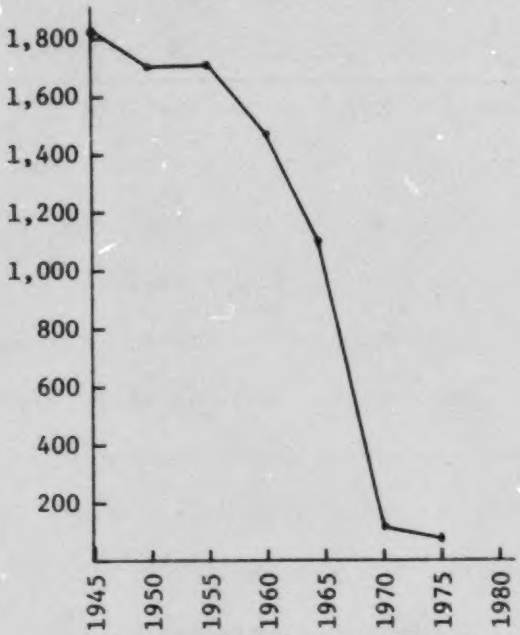
(c) What level of student busing services is appropriate in relation to needs and to current economic realities?

VI. ADMINISTRATIVE ARRANGEMENTS

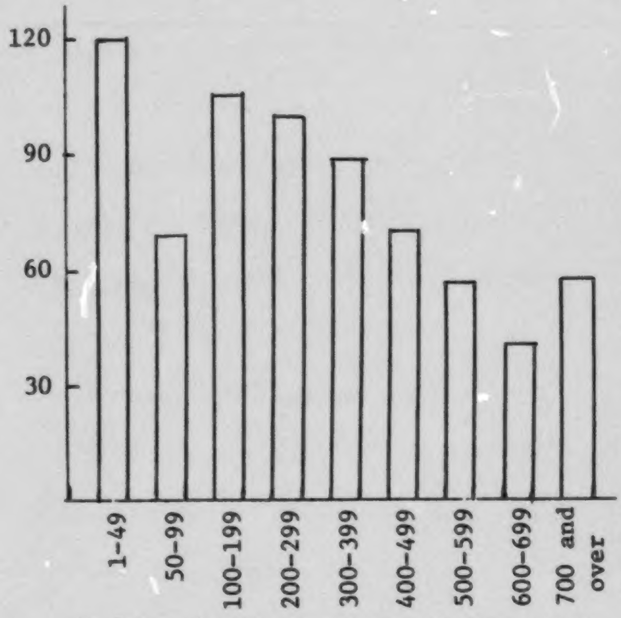
During the post World War II period in Manitoba dramatic changes in the organization and administration of the public school system have taken place. Probably the most important of these changes resulted from the consolidation and centralization movements and the virtual demise of the small school district and their typical one room district schools. In 1958 there were 1,651 operating school districts in the province, and 1,410 one-teacher rural schools. As late as 1965 there were 1,047 operating school districts, and 825 rural one-teacher schools. With the establishment of unitary school divisions beginning in 1967, the major consolidation of school systems occurred, resulting in the almost complete disappearance of the typical school district organization. In 1978, the school administrative units in Manitoba include 47 school divisions together with 15 smaller school districts operating in the more remote parts of the province.

The consolidation of school districts was accompanied by two other administrative developments of note: the emergence of large schools and the appearance of a small number of regional secondary schools.

All of these developments in the administration of education were based on certain arguments which helped to weave a solid case for the centralization of schools and the consolidation of school districts. One argument was for economic efficiency--potential savings in administrative costs, teacher salaries, materials and supplies, and special services. A second argument was for organizational effectiveness--in administration, teaching and resource utilization--through eliminating duplication of effort and reducing fragmentation. A third argument was for equalizing expenditures on education and for a more equitable sharing of the effort to finance education. A fourth argument was for equality of educational opportunity. Quality could be achieved economically only in relatively large schools offering breadth and depth in educational programs and a wide array of support and specialist services.



Number of Operating School
Systems in Manitoba



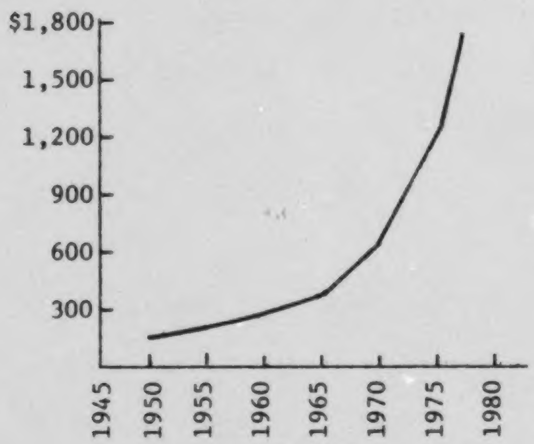
Number of Schools by Enrolment 1975

In the future, as the number of students declines and if funds available for education continue to be limited, will similar arguments be made, leading to a further reduction in the number of local authorities and small schools? Will the centralization of schools and the consolidation of school systems continue? Are there limits which can or should be placed on centralization and consolidation?

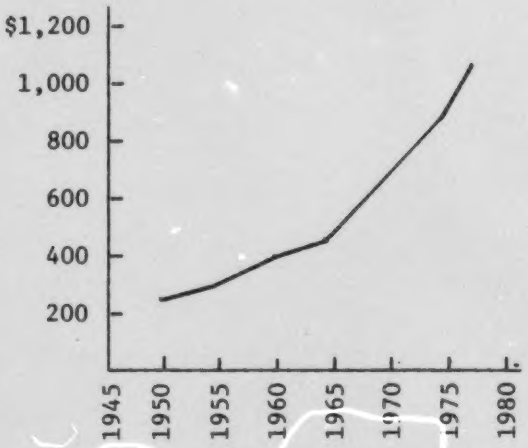
Does available evidence support the arguments which have traditionally been made for centralization and consolidation? Are there costs associated with centralization and consolidation which have not been taken into account and which should be?

VII. EDUCATIONAL FINANCE

Expenditures on public education in Manitoba have risen dramatically in recent decades. Average per pupil expenditures per year rose from $151 in 1950 through $662 in 1970 and $1,290 in 1975 to $1,702 in 1977. Most of this increase, can be attributed to five sets of factors. The first set of factors is student related: changes in the student population and in pupil-teacher ratios. The second set is related to teachers and personnel policies: increasing salaries and the extensive employment of highly qualified and experienced teachers. The third is related to programs, especially the expansion of secondary school programs. The fourth is related to the operation and maintenance of the physical facilities--buildings and buses--of the larger and more complex school systems in the province. A fifth factor relates to the general effects of inflation--the increasing costs of all goods and services over the years.



Per Pupil Expenditures--
Current Dollars



Per Pupil Expenditures--
Constant (1971) Dollars

Historically, the factors accounting for the rise in expenditures in school systems have occurred together but have operated somewhat independently. For example, there is no cause and effect link between the level of teachers' salaries and the pupil-teacher ratio. These factors have also tended to have something of a compounding effect on one another. To carry the example through: if salaries are held constant and pupil-teacher ratios are reduced, more teachers will be employed and costs per student will increase.

The independent but compounding operation of these factors have resulted in a significant cost-push effect in education which will be difficult to arrest as the province moves towards contraction. The difficulties are of three kinds. One has to do with the fact that some costs are relatively fixed. For instance, there will be no savings in energy costs if a given classroom is occupied by fewer students. The second has to do with the fact that certain variable costs might have an impact on the quality of education. For example, costs could be reduced by increasing pupil-teacher ratios, but at what price in terms of quality of education? The third has to do with the notion of "critical mass" in education. A typical example might be that of a rural secondary school with an enrolment of 100 students which through enrolment reduction was reduced to 25 students. Unless some allowance is made for the preservation of courses and curriculum opportunities through some agreed minimum establishment, the education of students is bound to suffer.

The foregoing questions, which tough on limiting or reducing the costs of education, are thorny. But they are no more thorny than are two other questsion: who pays?, and by what formula will available provincial funds be allocated to school divisions and districts? Consider further the example of the small high school. A division would receive grants towards the salary of two teachers for this 25 student high school under present arrangements. Any additional staff to make possible the preservation of programs could only be employed with locally raised funds. In such a situation the onus is on the local authority for maintaining educational quality. The local authority is placed on this position because of a formula for provincial funding which is based largely on the student-teacher ratio.

1. Can an acceptable level of educational quality be provided for the students of the province under present demographic and economic circumstances while at the same time maintaining cost increases at reasonable levels?

2. Can cost-sharing arrangements between school divisions and the provinces be devised to provide adequately for the variety of factors that affect the level of educational expenditures, such as enrolment changes, quality of education considerations, inflation and the varying fiscal capacity of school systems?

VIII. MANAGING CONTRACTION: A RESEARCH AND ACTION AGENDA

In seven or eight years time, when the current movement toward contraction will have spent itself, some academic researchers no doubt will produce a learned account of how the contraction of Manitoba's educational system was managed. In the meantime, deciding what to do and what not to do will be difficult. Handling contraction without diminishing the quality of education will not be an easy assignment.

What conditions are needed, then, to ensure that this difficult assignment is completed well? The task is twofold: first, to create a community interest which will increase the likelihood of effective action; and second, to ensure that action and research are carried out in areas of highest priority.

Toward a Community of Interest

The various agencies and groups of individuals involved in education in Manitoba tend to have differing primary interests. In the past, competition among these interests perhaps was affordable (there seemed to be enough resources "to go around"), and the conflict which can accompany competition was muted. Recently, however, there are indications that conflict is intensifying and, and in some cases, is becoming acrimonious. Political processes take on a different color when the groups involved are in defensive rather than optimistic moods. While this is understandable, and to some extent desirable, it should not be allowed to go too far. Both co-operation and conflict are necessary for a healthy educational system. Opportunities for discovering areas of mutual concern among all parties must be created.

Toward an Action Agenda: General Principles

The process of contraction will be a complex, multi-facetted endeavor. It will be uneven and cyclical, for resources and demands will not fall evenly. And it may become a depressing task, sapping the energies of people without reward and leading them to withdraw from education.

Two things emerge from this brief commentary as being essential.

One, policies must not be panaceas. While policies might reflect an overall trend to contraction, they must take into account local and regional differences.

And two, to prevent needless waste of energy, opportunities for qualitative improvement must accompany the demand for quantitative contraction.

Toward a Research Agenda: General Principles

The matters of declining enrolment and contraction have become key elements in the new mythology of Canadian education. Like all mythologies, this one contains an element of reality. But is a generalized and highly distorted picture, without balanced perspective. One example illustrates this. Much appears in the media about the surplus of teachers and the need to reduce the number of teacher graduates each year; yet many informed professionals in Manitoba can document the fact that the overall surplus is small and confined to Winnipeg. This suggests that the number of graduates should not be allowed to be lower than at present.

Needed, then, is more information about certain critical aspects of the system now and in the near future. Such information should both aim at a realistic picture of education in the province, and be accepted as the information base for planning by agencies and groups.

IX. SUMMARY OF THE SEMINAR

The general conclusions of the Seminar on Declining Enrolments may be summarized as follows:

(a) The issues raised in the background papers represent a fair summary of the problems associated with declining enrolments.

(b) The challenges relating to staffing, student transportation, programs and administrative arrangements as a result of current enrolment declines are probably best handled at the school system level because of the differential nature and effect of declining enrolments in different areas of the province.

(c) The major role of the Department of Education would be in helping individual school systems to gather statistics relating to their particular circumstances and in assisting in their planning, at their request.

(d) The problems of school system financing raised in relation to declining enrolments appear to be associated with broader issues of school finance which must be dealt with in the overall context of provincial priorities for public finance.

STATISTICAL APPENDICES

The statistical information in the following pages has been obtained from a variety of sources, principally the Manitoba Department of Education, Statistics Canada, and the Manitoba Association of School Trustees. While the data are subject to some qualification and interpretation, they represent what we feel to be the best available.

The tables are presented in such a way as to facilitate analysis of yearly conditions and trends in individual school divisions, regions of the province and the province as a whole, particularly for the period 1971-78.

Unless otherwise noted, data were secured from the Department of Education.

LIST OF MANITOBA SCHOOL DIVISIONS AND DISTRICTS BY NUMBER

Urban Divisions

1 - Winnipeg
2 - St. James-Assiniboia
3 - Assiniboine South
4 - St. Boniface
5 - Fort Gary
6 - St. Vital
8 - Norwood
9 - River East
10 - Seven Oaks
12 - Transcona Springfield
40 - Brandon

Northern Divisions and Districts
